DETAILED ACTION

Response to Arguments

1. In response to applicant's response filed 27 April 2005, the status of the application is as follows:
2. The objection of the specification is withdrawn in view of applicant's arguments and amendment overcoming the objection.
3. Applicant's arguments with respect to the rejection of claims 3-4 under 35 USC §102(b) over CHEYNE have been fully considered but they are not persuasive. In response to applicant's arguments that the "power supply and its control thereof as disclosed in Cheyne functions differently to that of the presently claimed invention", specifically that the latching circuit of Cheyne does not disable the buck converter circuit, this is not persuasive because applicant's arguments are directed to intended use and are afforded little patentable weight in the claimed apparatus. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963). In the instant case, since the structure of CHEYNE anticipates the direct current power supply as claimed by applicant, and is fully capable of performing the claimed intended use as shown by the structural arrangement. It is further noted that the power supply in

applicant's "DISCLOSURE OF THE INVENTION" (see page 3) is directed to the power supply of CHEYNE.

Moreover, applicant's reference to the CHEYNE latching circuit as reference numeral "186" is confusing since CHEYNE does not refer to such reference numeral. Thus, it is unclear what portion of CHEYNE applicant relies to refute the Examiner's rejection.

Accordingly, recitation of CHEYNE reads on applicant's claimed invention.

Claim Rejections - 35 USC § 102

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

5. Claims 3-4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by U.S. Patent No. 5,604,387 to CHEYNE. CHEYNE discloses a direct current power supply with a switch mode power supply, switching devices a circuit connected to user controller (push button switch) for switch a load on and off, and a capacitor (see Figures 1, 2, 6 and relative associated text). The direct current power supply of CHEYNE reads on applicant's claimed invention.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
7. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
